

John Dominic Jasmin

AI Automation Engineer | Ex Mobile Dev | Scaling Workflows with Python, n8n & OpenAI APIs

✉ johndominicjasmin@gmail.com 📞 [09263208902](tel:09263208902) 📍 Tanauan City Batangas 🌐 <https://johndominicjasmin.com>

SUMMARY

Software Engineer and AI Automation Specialist with over 5 years of engineering experience across mobile, backend, and automated system designs. Deeply technical background spanning Python, Node.js, n8n, and OpenAI API frameworks. Highly skilled in designing autonomous content pipelines, Meta Graph API integrations, and low-latency workflows. Leverages enterprise mobile software principles to build scalable, reliable, and production-ready AI solutions for global clients.

SKILLS

Automation:

n8n, GoHighLevel (GHL), Make.com, Zapier, Botcake

AI & APIs

OpenAI API, Assistants API, Anthropic API, Gemini API, Grok API, Vapi Voice API

Languages

Python (FastAPI), Javascript (Node.js), Kotlin, SQL, Dart

Databases

Supabase, PostgreSQL, NoSQL, Firebase, MySQL

System Integrations

WhatsApp Business API, Cloudinary, JSON2Video, REST APIs, Facebook Graph API

🔧 Engineering Core

Git, GitLab, CI/CD, Architecture Design, Unit Testing, E2E Testing

EXPERIENCE

AI Automation Engineer (Remote)	Contract/Freelance	Feb 2025 - Present
- Architected and deployed an autonomous AI customer pipeline using n8n and OpenAI APIs, successfully replacing 100% of manual message routing across 3 business branches. - Engineered an automated lead management engine using GoHighLevel and custom Python scripts to slash lead-to-response speed down to under 60 seconds. - Developed a production-grade inbound voice agent via Vapi Voice AI to automate qualification and real-time appointment booking. - Programmed custom Python and JavaScript (Node.js) backend microservices, secure REST APIs, and webhook processors to support autonomous agent workflows. - Configured cross-channel automations using the Meta Graph API and Supabase/PostgreSQL databases to handle complex Inquiry Classification workflows.		

Senior Android Developer (Ortigas Pasig)	Seven Seven Global Services	Mar 2025 – Mar 2026
- Engineered scalable backend API integrations and object-oriented architectures to ensure secure, high-performance data syncing between clients and core servers. - Optimized system code architecture and debugged production environments via Dynatrace logs, driving a 20% reduction in application crash rates. - Managed automated GitLab CI/CD pipelines to accelerate software delivery cycles and resolve critical SonarQube technical debt findings. - Led cross-functional collaboration using Figma and Miro, aligning platform engineers and backend teams to move features from prototype to live production systems. - Mentored junior developers through technical onboarding, system architecture walkthroughs, and rigorous code reviews.		

Android Engineer (Makati City)	Disrupt'em	Apr 2024 – Feb 2025
- Programmed custom Python and JavaScript (Node.js) backend services, developing microservices, secure REST APIs, and automated tools supporting core system functionality. - Boosted application data performance by 25% by optimizing local device resource management and restructuring API data handling payloads. - Architected and maintained robust CI/CD automation pipelines, entirely eliminating manual deployment errors while streamlining automated builds. - Orchestrated automated mobile and integration testing suites using Appium and WebDriverIO to maintain consistent, bug-free production builds.		

PROJECTS

Reconciliation & Resilience Pipeline

Built a self-healing reconciliation prototype using FastAPI, Redis, n8n, Supabase, and OpenAI — idempotent ingestion rejects duplicate transactions, AI classification routes low-confidence results to manual review, and a circuit breaker with dead letter queue recovers automatically from live provider outages.

PropConnect AI Voice Agent

Engineered inbound/outbound real-estate voice AI scripts via Vapi and n8n to qualify and book live appointments into GHL CRM calendars autonomously.

MultiSales AI

Built a production-grade chatbot framework handling autonomous sales routing via n8n, OpenAI Assistants API, and Meta Graph API.

Smart Lead Routing System

Created a microservice using n8n and Supabase to ingest incoming webhook payloads, classify leads, and trigger sub-60-second SMS marketing workflows.

EDUCATION

(BS Information Technology)	Batangas State University (The National Engineering University)	2020 – 2024
